Kmita HTML form builder

Hits: 518

Description: Kmita HTML form builder is remotely hosted form builder which makes forms for you on the fly. You need to select the fields that you want and you get the form HTML as you keep adding fields. The Kmita form builder supports following fields : Textbox, Text Area, password, Hidden, Radio Button, Radio button group, Check box, List box, file field and button. Some basic options are already set so that you need not type in every specification(though you can change them). You can move the form fields up, down as per your requirements. Kmita Form builder is very easy to use. Compatible with Kmita Mail v.3
