ASaP PHP

Hits: 4,936

Description: Search, Modify, Add, and Delete online Records. Using ASAP you connect to your Access, SQL or MySQL database, choose necessary fields, design the color scheme and then generate PHP pages and upload those pages to your ISP within the program. Features include DropDown Lists, Relational Capabilities, Password Protection, Image & Hyperlink Support. Template feature allows you to use a pre-existing look from your website to maintain that look in your generated page. *** New HTML area feature allows you to add or edit fields using user friendly HTML tags (content manager) ***. Shopcart Version will allow you to turn your database into an online shopcart.

I needed to post our membership online and found this tool and was amazed at how fast I was able to get the membership on the web live. I was also pleased to find out that I could password protect the add, modify, and delete pages so that the data could not be tampered with. Bravo for ASaP PHP!

This program got me out of a bind. I had taken on a project to display our members artwork with descriptions. It all came together so nicely and am very impressed. Best of all I didn't have to concern myself with programming.

Made my job a breeze!, Feb 8th, 2008

This software was an answered prayer! I had been searching for sometime for a program that would generate a web based MySQL database interface page for my website without haveing to spend months learning code. asap enabled me to do this in only a couple of hours allowing time to master the program. Very easy and user friendly to use with helpful tips for making it all work.
