Domain Whois PHP Script

Hits: 3,438

Description: This is a fully customisable multi-lingual PHP whois lookup script that can be used stand-alone or with most checkout and hosting systems. The script will look up one or more multiple TLD's against a given domain name. Included is a CAPTCHA image for security to stop external linking. Each available domain can have an optional 'Buy Now' style button that can be linked in with most cart or checkout hosting systems. You also have the ability to lookup the whois info for any domains already taken. The script is fully CSS driven and can be changed to fit in with your own site's look and feel. You can customise which TLD's the script will search for and it gives you real-time progress on your search before displaying the results. There are three versions, Free, Standard & Pro

ZiWeb Whois Script Review, Aug 30th, 2007

Reviewed By: crustygeek

An excellent script that caters for all pockets. I especially liked how the script integrated seamlessly into my Accountlab hosting software. Perfect for beginners and Pros alike... well worth the £20 for the pro version.
