V-Express Video E-mail Pre-Launch

Hits: 483

Description: Now Real Live Flash Video Embedded into any email and sent out to any email client. That's right, No special security switch patch for download, it is not a link to a website, and it is not a video player sent as an attachment. No Smoke and Mirrors, we have actually invented a process to which you can now put a flash file right into the body of a email, and send it out, just like a regular html email. MVA is the only company to develop this process and that is why it is patent pending.

Be the first 200 to pre-register for a Demo of this amazing tool, and we will give 25% off the regular price. Once our beta testing is done in the moth of April and we go live with our Demo on April 17th.

"Imagine The Possibilities"

Resource Specifications

Version:	1.0
