Hits: 333

Description: A PHP obfuscator that will obfuscate functions, variables, classes and even constants. Each of these groups can be given regular expressions so that you choose exactly which are obfuscated and which are not.

Also removes comments and whitespaces. This obfuscator uses PHP's own tokenizer to get the best results reliably and is released under the GPL. Yes, it's entirely free.

Resource Specifications

Version:	1.0.0
Platform(s):	linux, windows, freebsd, osx, sun
Date Added:	Sep 18th, 2007
Last Updated:	Sep 18th, 2007
Author:	AsIs Technologies

Average Visitor Rating:  **3.50** (out of 5)
