Ecrion XF Rendering Server 2008

Hits: 472

Description: XF Rendering Server 2008 is a highly scalable, enterprise class rendering product. It can be used to automate the creation of electronic documents like technical manuals, brochures, catalogs and marketing materials, invoices, statements, business reports containing charts and graphs, by dynamically generating them from XML.

By choosing XF Rendering Server 2008 when designing your reports, charts or graphics, you are not tied to some custom format and you will be able to switch to another renderer at any time. The server can use XSL-FO and SVG as languages used to describe your documents, both W3C (World Wide Web Consortium) recommendations.

The main new features available for XF Rendering Server are: XSL-FO 1.1 compliance; Generation of print-ready PDF documents, compliant with PDF/X; The option of saving documents in the PDF/A Format; Tagged PDF support for accessibility; Professional publishing features including support for RGB, CMYK and PANTONE® colors.
