PHP Networking Tools (dns,rdns,traceroute,whois,iplook)

Hits: 2,734

Description: PHP DNS, PHP rdns, PHP traceroute, PHP whois , and PHP ip info. This package incorporates all of the above in one nice little package that is easily customizable to your site.

If your server has the above binaries installed on it's linux server all this program does is execute the command line and return the result.

This is great for people who would like to draw additional people to your website by offering commonly used services to the masses.

Resource Specifications
