Track The External Referrals To Your Website

Hits: 238

Description: This script will track any incoming referral to your website, so you can tell where visitors are coming from to your website, whether this is a search engine, or another person's website, and records the URL of the referring website. This way, you can take a look at the websites of people who are linking to your website, even if you don't know who they are. To use the script, just paste the code into the top of the web page that you would like to track incoming referrals. This script should only be used once per page, but it can be used within as many pages of your website as you like. You could include the script within every page of your website, and then you would know who is referring all of your visitors to your website, and the URL's of those referrers. Awesome!
