Globiz PHP Framework

Hits: 518

Description: Globiz PHP Framework is designed as a template and multilingual engine. With the template engine, web developers can focus on developing web functions. The engine will replace pre-define tags on templates with web functions and generate web pages. Meanwhile, web designers are able to design templates without any understanding of programming. They only need to place tags in templates to locate where the programmers will output results from PHP functions. The multilingual feature is part of the template engine. In the PHP code, all text output should be placed in language files. The engine will load selected language file according to your setup and visitors' selected languages. The framework comes with an example to show how multilingual and templates work. Globiz Web User Management is a demonstrate for web developers who are interested in the framework. You can download it from the website and see how we use the framework to develop it.

Resource Specifications

Version:	1.0
Platform(s):	linux, windows, freebsd, osx, sun
Date Added:	Nov 14th, 2007
Last Updated:	Nov 14th, 2007
Author:	Globiz Solutions

Average Visitor Rating:  **0.00** (out of 5)

Number of Ratings: 0 Votes
