ClickBank Contextual Ads for your Site

Hits: 518

Description: Put contextual (Google AdSense Like) ads for any ClickBank product on your website or blog. Our free Ad Builder tool allows you to create and deliver ads based on the section and subsection of ClickBank you want or on the keywords you specify. You can choose a range of ad formats and colour it any way you wish all with a handy tool ready for you to use. You can even select the number of products you wish to show. At the click of a button your ad code is generated and you only need to paste this into your website or blog. Ads are delivered as an <iframe> so they work just about anywhere. The ads are refreshed each time a visitor refreshes your page so they're always new. And as the ClickBank database is updated every day the ads are also up-to-date with the latest products. The database is also hand built so the descriptions are better and more relevant to your site's users.

Resource Specifications

Version:	1.1
