Free Axence NetTools 3.1

Hits: 824

Description: Free Axence NetTools is a comprehensive set of host monitoring, network scanning, security & administration tools - all with a highly intuitive user interface:

- Port scanner - checks for all open ports and running services. It can discover some Trojans/spyware.
- Network scanner - discovers all nodes in a remote network, their IP/MAC and services running on them.
- NetStat - displays your computer's inbound and outbound connections, lists all open TCP/UDP ports, with the remote IP address & the process using the connection. - TCP/IP workshop - establishes low-level TCP/UDP connections to troubleshoot and test network services.
- Other tools: fast traceroute shows information about every host on the route, its response time, and packets lost (full trace within 1 second). Lookup is like nslookup, but it shows all DNS and WHOIS records at once. Bandwidth tool will measure network performance. NetCheck - checks your LAN-network hardware quality.

Resource Specifications

Version:	3.1
Platform(s):	windows
Date Added:	Jan 17th, 2008
