Image Gallery with auto-scan

Hits: 2,423

Description: Image Gallery for PHP (v4 and up). Scans the target dir automatically. Sub-dirs can be included. Thumbnails will be created in custom sizes. Supports png, gif and jpg. Number of pics per page and number of pics per row can be adapted. Can handle large files, by creating the thumbnails of small copies of the pics. Each picture can be annotated by a custom comment. Comments can include variable like file-date, file-size and file-name. Can support multi-language websites. Appearance can be adapted in many cases (by using css-classes). The list of the images can be reverted, so that the newest pics come first.

Resource Specifications

Version:	v1.0.2
Platform(s):	linux, windows
