Injection Scanner

Hits: 1,056

Description: Injection Scanner is a PHP-based script that parses the query strings in a URL. By comparing the query string to known injection and remote execution exploits, it can effectively secure a webpage from being exploited. When an exploit is detected, the script halts all PHP processing, logs the pertinent data into a database, and informs the visitor of the detection. IPs associated with bad queries can be banned from any page in which the script is included.

Resource Specifications

Version:	1.0
Platform(s):	linux, windows, freebsd
Date Added:	Feb 29th, 2008
Last Updated:	Feb 29th, 2008
Author:	Scott J. LeCompte

Average Visitor Rating:  **3.33** (out of 5)

Number of Ratings: 3 Votes

Average Member Rating:  **0.00** (out of 5)
