After searching for quite some time to find an easy way to install PHP4 without recompiling Apache this guide did it for me.

Her outline of handling PHP4 as a DSO is fantastic and made me much more comfortable at running PHP3 & PHP4 concurrently.

Julie's direction is concise and even though I ran into a couple issues that were specific to my server (Cobalt RaQ2) the provided resources were terrific in helping put me on track to working around them.

I have dropped them an email with the details to getting around these Cobalt issues and hope they will post a small entry lining them out for others who may be able to use them.

Thanks Julie & Webmonkey!!!
