Mailit © v2.6

Hits: 204

Description: Mailit © can handle all of your form email needs, including Multiple File Uploads of any type of file with max size (allowed) to your web site, as well as removing credit numbers or private fields from the users return email. It can redirect the user to another page or site, or display an Internal thank you page which you can make to look like the rest of your site.

Mailit uses a required hidden field to take care of any of your required fill in field needs, and you can add any amount fields you want and more!

Mailit © now comes with Image Verification Security Code feature. This stops remote spoofing and spam, because the user has to enter the Code displayed in order to continue.

Mailit © Also comes with some sample forms to show you the different ways you can construct your own forms to suit your needs, as well as a few button and background images that you can use or change to suit.

Resource Specifications

Version:	2.6
Platform(s):	linux, windows, freebsd, sun
Date Added:	Mar 15th, 2008
Last Updated:	Mar 15th, 2008
