Affiliate ClickIt Script

Hits: 207

Description: This php script uses a database to store member information. This script is used as an addition to any website wanting to offer a unique affiliate program.

This affiliate program is different than many because it pays affiliates per unique visitor rather than per sale. Registered affiliates can use banners or links to advertise and the administration (you) set how much to pay per unique visitor. Registered affiliates can request payout when they have reached the amount set by the administration (you).

This script is setup to catch cheaters by allowing only unique visitors. Registered affiliates that try to cheat the system will get automatic marks and the administration (you) can cancel the registered affiliates account at any time.
