# OutPost Framework - WebForms and Ajax Hits: 85

**Description:** It is already an established problem in Ajax that developers would still need to develop almost two types of applications if they wanted to build an online application good for Mozilla and Internet Explorer. Because of this struggle, developers would have to build almost two different applications that will require a lot more than the usual time for application development. The end result however, is well worth it. A highly efficient Ajax based application does not only provide eye catching features but could easily provide a highly effective application with processing speed that almost rivals any simple web-based application. Transmitting only the data needed in the application for Ajax has lessened the bandwidth requirements for an Ajax based application.
