# Activating SOAP using Ajax

Hits: 165

**Description:** Any business transactions who want nothing more than security, speed and accuracy of application use SOAP for information transportation between applications. Using HTTP, developers are able to use the internet and more specifically, the browsers to ensure that the application and information transfer will never require more than a stable internet connection. Based on current technologies today, SOAP web services is stronger than ever because of the advantages it ensures. The development of Ajax development techniques made it even better for SOAP web based services. SOAP uses XML for data transfer which is a very smart choice. As a universal data mark-up XML could practically be integrated to any browser with the full security you can expect from any mark-up protocol.
