Programmatically setting the focus on asp.net control

Hits: 154

Description: Using asp.net Code Behind (aka asp.net code, regardless of where it is situated) you can write your pages to display the blinking cursor (focus) on a particular web control. This improves the usability of your forms for end users. Copy the code example shown in Code Field 1 and paste this data into your Page_Load subroutine...

Resource Specifications

Version:	1.0
