## Tukanas Bookmark script

Hits: 397

**Description:** By using the Tukanas Bookmark script visitors could store, organize and share bookmarks of web pages. In a social bookmarking system, users save links to web pages they want to remember and /or share. People allowed to view these bookmarks can do so chronologically, by category or tags, via a search engine or even randomly. These bookmarks are usually public. But, depending on the service's features, they may be saved privately, shared only with specific people or groups, only inside certain networks or another combination of public and private. A convenient and easy solution to extend your current Website or Blog could be provided with Tukanas Bookmark script by adding a 'Add to Bookmarks' widget/pod/code to it. This will help send more traffic to your content by using the word-of-mouth aspects of social bookmarking. Every person who adds a link to your blog or site using a social bookmarking system helps raise the awareness about your content. View the online demonstration.

### Resource Specifications

<b>Version:</b>	1.0
