Customers Who Bought...

Hits: 239

Description: Have you ever wondered why Amazon.com is so popular Ecommerce shop?

One of the logical reasons is because they used a lot of innovating tricks to sell products. One of them is module “Customers who bought this – also bought this”. You can see this module on every page of Amazon’s product page!

ElearningForce being in the stream of latest solutions introduced this module for Joomla 1.0.x and Joomla 1.5 to help Joomla VirtueMart shops sell more!

Some features:

- * Works with different category products and display items with brief description filtered by category. As one of the selling categories becomes more popular—it will be displayed with the bigger font in a categories list of the tag cloud
- * Allows to show the exact products which were bought together with one of the products from your site or after the sale
- * You can choose among your products which of them you want to be analyzed. And you shouldn’t wait till the component collects enough statistics—you are able to add it manually!

Resource Specifications

Version:	1.0.1
Platform(s):	linux, windows, freebsd
Date Added:	May 3rd, 2008
Last Updated:	May 3rd, 2008
