# InsanityVille's Simple Form Validation

Hits: 1,275

**Description:** A simple way of validating a registration form via AJAX and PHP. It uses jQuery for AJAX calls and visual effects and a PHP/MySQL back-end to check for duplicates.

This little demonstration is made to illustrate the simple, elegant and unobtrusive way to make verifications on text fields without leaving the page.

## Resource Specifications

<b>Version:</b>	0.1
