PayPal PIN AddOn

Hits: 111

Description: This script will create a new table where the PayPal payments will be logged.

When a payment is completed, the PIN will be added and an email will be sent to the customer containing that PIN. We have added several security checks, so it should be quite impossible to get a PIN without actually paying through PayPal. By the way you will of course receive an email if anything goes wrong processing an order. Easy to install PayPal PIN AddOn: Open the file config.php and replace the email address. After all modifications in the config.php just upload all files by FTP. If you need help, we can integrate PayPal PIN AddOn with your existing site. Enjoy the bright ideas of Loginet Solutions.
