measuring php, jsp, asp cfm popularity, May 9th, 2001

Reviewed By: seann

This is a useful article, and one of the very few available.

The research methodology is rather crude, but the author acknowledges this.

Within an organisation using cfm and thinking about using php, it is really worthwhile to know the sort of percentage figures that we are talking about. Even better would be a projected trend, if anyone would be so bold.

A good effort worthy of further research.
