pChart

Hits: 2,349

Description: pChart is a PHP class oriented framework designed to create aliased charts. Most of todays chart libraries have a cost, our project is intended to be free. Data can be retrieved from SQL queries, CSV files, or manually provided. Focus has been put on rendering quality introducing an aliasing algorithm to draw eye candy graphics. In fact, quality is slowing down the renderer engine... this is one of our way of improvment!
