PHP Data Cache Class

Hits: 220

Description: PHP data caching class that caches variables using file handle write to cache data with or without an expiration time. I used `file_get_contents()` rather than `fread` to speed up the application even further. Rather than run a complex logic or queries each time the data is needed, we can cache data for 3600 seconds or an hour (adjustable).

Resource Specifications

Platform(s):	linux, windows, freebsd, osx
