PopCard Greetings

Hits: 701

Description: PopCard Greetings 2.3 (PopCard for short) is a free script which you can use to add Pixaria style electronic postcards to your website. PopCard was originally based on iCards which was a feature of Apple's iTools service which later became .Mac and is now called Mobile Me.

PopCard is (as far as I know) unique in that the card is sent to the recipient as a JPEG image rather than the user having to come to the site to pick it up which makes it a bit more personal than your average ecard.

Resource Specifications

Version:	2.3.7
Platform(s):	linux, windows, freebsd, osx, sun
Date Added:	Jul 1st, 2008
Last Updated:	Jul 1st, 2008
