SourceLock Pro

Hits: 262

Description: Most PHP developers who sell their scripts know this: After a short time, your script gets cracked by someone and served for download on warez sites. As nobody buys your script anymore but downloads it on those warez sites, you don't earn money for your work.

Stop this!
Now you can use SourceLock to encode your source code and prevent crackers from stealing your code!

No additional PHP modules required!
SourceLock doesn't need any loaders on your client's server - files encoded with SourceLock decode and execute themselves at runtime.

Lifetime license!
You only pay once for SourceLock Pro!
Your license never expires - You can use SourceLock Pro anywhere, anytime, without any limitations.

Resource Specifications

Version:	1.18
