## Ecrion - XF Designer 2008

Hits: 274

**Description:** XF Designer 2008 is a user-friendly, easy to learn document template editor with an advanced XSL-driven WYSIWYG (what you see is what you get) interface. Templates are XML documents that can be graphically created and edited within the XF Designer. Ecrion's Editor enables developers to create rich, professional looking documents, in the shortest amount of time. It is based on the same core engine as XF Rendering Server 2008 thus ensuring that the designed documents will match the expected output.

Among the primary benefits of XF Designer 2008 we can mention: Support of powerful visual design of XSL-FO documents; Greatly reduce development time while ensuring superior quality; Cost and time savings in the creation of documents; Integration in automatic processes such as database publishing, print-on-demand and batch processing.

### Resource Specifications
