FTab(Floating Tabs)

Hits: 762

Description: FTab(Floating Tabs) is a DHTML script that animates small browser windows with support for tabs. Use the mouse to move and resize the windows.

It use cookies to remember size, positions and window state(minimized or maximized), active tab and window stack order. But can off this with 'cookie:0;'. In the demo, try to move and resize some of the windows. Then refresh the page. It's easy to configure this script. You put your content into separate <DIV>s and then call a javascript function which creates the tabs dynamically.

Open example to see what how FTab. Had test in IE5.5,IE6,Firefox2,Firefo x3. Updated 2008/8/22, added expandable style.
