# WizzyWeb

Hits: 1,844

**Description:** WizzyWeb is the world's first Web-based Rapid Application Development tool enabling the creation, and testing of PHP or Perl SQL database and email applications in real time over the Web with any standard Web browser. Product catalogs, feedback forms, contact forms, search engines, mailing lists, guest books, quizzes, polls, etc. can be developed in minutes instead of hours or days. WizzyWeb applications can read, write, and update remote or local databases. WizzyWeb generates standard PHP or Perl source code for you to run on your Web site. Sendmail support enables you to send data entered by users to one or more email addresses and/or write the data to a database and/or file. WizzyWeb gives you unprecedented power and flexibility in creating Web applications. WizzyWeb's native (xml based) file format allows you to go beyond the script and save, re-open, modify, and test your applications inside the Web-based Integrated Development Environment (IDE) in real-time either at wizzyweb.com or local on your Web server, if you have PHP or Perl installed. WizzyWeb is being used by the biggest companies in the world, (e.g., IBM, Intel, Oracle, Sun.)

## Resource Specifications

<b>Version:</b>	4.0
<b>Platform(s):</b>	linux, windows, freebsd, osx, sun
<b>Price:</b>	FREE!
<b>Date Added:</b>	Dec 7th, 2000
<b>Last Updated:</b>	Apr 16th, 2005
<b>Author:</b>	Standard Applications, Inc.
