# My Photo Gallery

Hits: 36,141

**Description:** My Photo Gallery is a Web-based photo gallery with support for other filetypes. It is easy to setup and even easier to maintain. Slick-looking image/file galleries and thumbnails are generated on the fly from the directory that you specify. Creating an album is as easy as creating a directory and FTPing your pictures to that directory. A Web administration interface is available, and updating is just as easy. It also includes advanced features such as image logging, resizing, rotating (lossless), extracting EXIF data from digital cameras, and visitor comments. Many other file formats are recognized and given a special icon.

### **Best online photo gallery available, Dec 10th, 2002**

After searching the net for months looking for something similar to iMira's website, I came across My Photo Gallery v2.6.

At the time I was installing it I was very inexperienced at Linux, and perl. With the help of Mike Spice I managed to fumble my way to getting it up and running.

Unlike some other versions of online galleries, My Photo Gallery displays the images in 4 different sizes. 640, 800, 1024, and full. (3.1 does 320 as well). It also displays the EXIF data for the pictures that all new camera's and most older cameras place in the image. My Photo Gallery allows you to have comments for your pictures, as well as send the images to Shutterbug to have them print the prints and send them to you.

Everything is generated on the fly, and all areas are configurable. Because you generate on the fly, you never have wasted space. The different sized images only get created when they are requested for the first time. It also saves the image size preference that you want to view the pictures in the form of a cookie. It supports HTML for the descriptions, and news page. The new version v3.1 is even more configurable, with the ability to lock out folders within the program. Normally if you want to protect a page, you have to edit your httpd.conf.

This is an exceptional program, easy to use, easy to install, unbelievably high quality.
