Worked after only the 2nd try!!, Jan 13th, 2001

Reviewed By: michael7669

Not for the novice (like me), but it worked well once I figured out the docs were embedded in the java (.jr) file. Only limitation I can see is that it must load any and all pics (.jpg or .gif) before the page where they will later be viewed, or else the browser loads them first, then the script last (very fast, because then it's in the browser cache). I like it though. Very nifty freebee.
