# IntrSQL

Hits: 1,186

**Description:** The Compsys IntrSQL product is a component that allows SQL Statements to be run against almost any database over the Internet. The SQL Statement (along with DSN, Username and Password) are entered via any standard HTML (or ASP) page and the results are returned as standard HTML. The look and feel of the resulting HTML can be formatted by the user (via IntrSQL parameters) to suit most web styles and layouts. Most SQL statements are supported including Select, Insert, Update, Delete, Create, Drop etc. In addition IntrSQL also supports Describe (to detail the Table Attributes) for SQL Server, Access and Oracle databases. To run IntrSQL you require the database to have a valid Data Source Name (DSN) or connection string and the appropriate User permissions.

## Resource Specifications

<b>Version:</b>	2.0
<b>Price:</b>	Free Trial/\$99
<b>Date Added:</b>	Jan 18th, 2001
<b>Last Updated:</b>	Jan 18th, 2001
