# Mailer

Hits: 6,504

**Description:** Based on the Perl script, AlienForm, Mailer reads in all submitted variables and can accomplish a variety of tasks, including writing the data to a log file, creating custom browser output, or sending a formatted text e-mail. In addition, this script actually works on Windows platforms.

**1.1.4 Update:** Made a security fix and fixed a bug that caused some problems on Windows NT/2000 servers when trying to redirect.
