Jason's Postcards

Hits: 2,288

Description: This script allows visitors to send A Postcard to a friend. You have the option to pick which picture you want to send, the color of the font and background, along with your own comment. Once you hit 'Send,' the recipient receives an e-mail notifying them of the postcard and it's location. The neat thing about this script is that it checks and automatically deletes old postcards once a certain time has expired (you decide). Also, it will send an e-mail back to the sender when the postcard has been picked up!

Easy to install and use, Apr 22nd, 2002

Reviewed By: loxly

I have looked at most of the available ecard scripts and found this one to have the cleanest look and be the easiest to set up and use. I prefer to use my own photos, so am not using the upload feature. The templates are pretty easy to modify. Also, the postcard recipients are directed to a page that has their card on it, so they don't have to log in with a code that could be mistyped, that could be a hassle!

Overall, I liked it, especially for a free script.
