## Site Search with Index Server 3

Hits: 2,816

**Description:** This is a complete set of scripts to integrate a site search function with Index Server 3. The scripts assume that you've enabled indexing of the site, and enabled the indexing service itself - and of course that you're running Windows 2000 Server. If you don't have administrator access to the web server, you'll need to speak with your web hosting provider to ensure that it is set up.
