Pick the Color

Hits: 3,288

Description: This script shows how to find the numbers (RGB) to use for any given color, or to find what color will be created by a given set of RGB. This example uses (1) an HTML file, (2) a DIV-CONSTRUCT javascript file, and (3) a COLOR javascript file. This example is quite complicated, and requires extensive knowledge of how both IE and NS work on the DOM, mouse movement and clicks (unclicks too) event handling, as well as Dynamic HTML - moving objects around the page, and also how to find objects on the page.
